

## Ödev

In this assignment you are required to make a submission for the following Kaggle competition:

<https://www.kaggle.com/c/house-prices-advanced-regression-techniques>

Important notes:

1. For submission first you need to create a Kaggle account.
2. For prediction you can use linear regression and some extra things like scaling and polynomial features that we discussed in the class. Do not use any other machine learning algorithm. You can use sklearn for linear regression and for other purposes.
3. You should upload 2 files to itslearning system: Python codes that you will write for this assignment and a screen shot showing your rank in the leaderboard.

**Don't forget to check the deadline. Late submissions are NOT allowed.**
